

Eventide

H90 Harmonizer

1. GET EVENTIDE CONTROL AND UPDATE YOUR H90

Eventide Control is Eventide's app for the H90. Download it for Mac or PC below, open it and sign in with your Eventide username, not your email address. Connect the H90 with its USB-C cable. Click **Add Device** in the top right corner and select **H90 Pedal**. If an update is offered, click the cloud icon and follow the on-screen steps.

2. BACK UP YOUR H90

On the Home screen, click **Connect** next to your H90. In the Edit menu, click the burger icon and choose **Backup Device**. This saves a full backup file on your computer.

3. LOAD YOUR SOUNDSHOP PRESETS

Unzip your download and find the .lst90 file in the Presets folder. In the Playlist on the left, click the 3-dot icon, choose **Import List** and pick the .lst90 file. Select the new list in the Playlist drop down menu.

4. TEST OUT YOUR NEW PRESETS

You are good to go. Play through the Programs and see what inspires you. If you share a clip, tag the artist so they can hear how you are using their presets.

Troubleshooting Tips

Lists made in Insert routing cannot be used in Dual routing, and vice versa. If your pack has Insert and Dual folders, import the one that matches **Routing** on the Global page of your H90's System Menu.

Using H90 Control? It has the same Import List and Backup Device options.
