

TAL Software

# TAL-U-NO-LX

## 1. INSTALL AND REGISTER

Download the latest TAL-U-NO-LX installer from TAL's product page and run it. Open the plugin in your DAW and paste your serial key when it asks. Your key is in your TAL user account. Paste the whole key, including its header. Until it is registered, preset loading is turned off.

## 2. OPEN YOUR PRESETS FOLDER AND BACK UP

Click the preset name at the top of the plugin to open its menu, then choose **Show Presets Folder...** to open the folder where you can copy additional presets. Copy that whole folder to another drive before adding anything.

## 3. ADD THE PRESETS

Inside that presets folder, make a new folder named after the artist. Copy the Presets folder from your download (it holds the .pjunoxt files) into it. In the plugin, click the **File** icon at the top to open the Preset Browser, then click the artist's name to see the presets.

## 4. TEST OUT YOUR NEW PRESETS

You are good to go! Play through the sounds and see what inspires you. Don't forget to tag the artist on social media if you share something. They would love to hear how you are using their presets.

### Troubleshooting Tips

Check out TAL's FAQ for their official troubleshooting tips.

Want just one sound? Use the Load Preset option in the same preset-name menu to open any .pjunoxt file directly.

Mac and Windows use the same preset files.
