

Ableton
Live

1. UPDATE ABLETON LIVE

Log in to your Ableton account and download the latest Live, or let Live install its automatic updates. Racks saved in a newer Live will not open in an older one. Our racks use **Glue Compressor**, so you need Live **Standard** or **Suite**, not Intro.

[Ableton Downloads](#)

2. BACK UP YOUR USER LIBRARY

In Live's browser, right-click **User Library** and choose **Show in Finder** (Mac) or **Show in Explorer** (Windows). Copy that folder somewhere safe.

3. LOAD THE RACKS

Open **Presets** in that folder and copy in the **1 - Presets** folder from your download. It appears under **User Library**. Put your piano or synth on a MIDI track and drag the rack ending in **FX** after it. The other rack has no instrument inside, so drop your piano or synth into it right after **Scale**.

4. TEST OUT YOUR NEW PRESETS

You are good to go! Play through the sounds and see what inspires you. Don't forget to tag the artist on social media if you share something. They would love to hear how you are using their presets.

Troubleshooting Tips

[Ableton Live Manual](#)

Pro Keys needs the plug-ins listed in your product manual. Waves runs in Live as VST3 only, so if one will not load, add the VST3 version and drag our .xps preset onto it.

Pro Keys racks use Mac Audio Unit plug-ins, so on Windows those plug-ins will not load.
