

GFI System

Specular Tempus

1. GET SPECLAB AND THE LATEST FIRMWARE

SpecLab is GFI System's free editor for the Specular Tempus. Download it from the **Editor** tab of the downloads page below. The firmware and update steps are on the same page. Read the **Attention** note first: very old pedals must contact GFI before updating. Update SpecLab and the firmware together.

2. CONNECT AND BACK UP

Connect the pedal to your computer's USB port and open SpecLab. First open SpecLab's **Menu** and choose **Backup**. It saves every preset on your pedal to your computer and shows Backup complete.

3. LOAD THE PRESETS

In the **Local Preset** box, click **+** and choose **Add preset from file (s)**. Select the .lop files. Pick one, choose a page, bank and A or B slot you are happy to replace, click **WRITE** and confirm. Repeat for each preset. Got one .bkp file instead? Back up first, then choose **Restore** in the **Menu**. It replaces all 32 presets on your pedal.

4. TEST OUT YOUR NEW PRESETS

You are good to go! Scroll through your new sounds and see what inspires you. Don't forget to tag the artist on social media if you share something. They would love to hear how you are using their presets.

Troubleshooting Tips

Pedal not showing up? Replug the power and the USB cable, then click Connect. On Windows, install the USB driver from the Driver tab first. Macs do not need it.
