

Eventide

H9 Harmonizer

1. GET H9 CONTROL AND UPDATE YOUR H9

H9 Control is Eventide's free app for the original H9 (Max, Standard and Core). Download **H9 Control App** for Mac or PC below. Plug in the USB cable before you power on the H9, then open H9 Control. Click the **Pedal** icon at the bottom, then **Update Stompbox's Software**. Pick the latest release and click **Install Software**. Keep the pedal powered until it finishes.

2. BACK UP YOUR H9

Open **Preset Lists** and click the H9 icon on the left to show your pedal's presets. Click **Save to Mac** (or **Save to PC**) to save a copy on your computer.

3. LOAD YOUR SOUNDSHOP PRESETS

Unzip your download and drag the .h9z file onto the H9 Control window to import it. In **Preset Lists**, click the Mac (or PC) icon on the left, select the new list and click **Save to Pedal**. This replaces the presets on your pedal.

4. TEST OUT YOUR NEW PRESETS

You are good to go. Play through them and see what inspires you. If you share a clip, tag the artist so they can hear how you are using their presets.

Troubleshooting Tips

An H9 Core or Standard skips presets that use algorithms you have not purchased. Newer algorithms like TriceraChorus need the latest H9 software.

H9 Harmonizer Gen 2? Use Eventide Control. Its Import List option opens .h9z files.
