

Meris

MercuryX

1. GET PREDITOR AND THE LATEST FIRMWARE

prEDITOR is Meris's free Mac and PC editor for the MercuryX. Click **FREE DOWNLOAD** on the page below and pick your installer. For firmware, fill out the form on the MercuryX product page. Meris emails it, and the manual shows how to install it.

2. CONNECT AND BACK UP

Use a solid 9V supply (300 mA or more) and connect USB-C or a MIDI interface. Open prEDITOR and choose MercuryX. On the **LIVE DEVICE** page, click **RECEIVE ALL**. When it says 99 PRESETS RECEIVED, click **OK**. Then click **SAVE TO LIBRARY** to keep a backup.

3. LOAD THE PRESETS

Click **IMPORT EXT LIBRARY** and choose the .json file in your download's Presets folder. Click **LIBRARY ORGANIZER**. Set one side to the pack and the other to **LIVE DEVICE**. Drag a preset onto a slot you are happy to replace and click **REPLACE**. prEDITOR saves it to your MercuryX. Never use **SEND ALL**, which overwrites every preset.

4. TEST OUT YOUR NEW PRESETS

You are good to go! Scroll through your new sounds and see what inspires you. Don't forget to tag the artist on social media if you share something. They would love to hear how you are using their presets.

Troubleshooting Tips

Import does nothing? Select MercuryX in prEDITOR's pedal dropdown. USB-C not working? Update the firmware or use MIDI.
