

Kemper Stage

1. GET RIG MANAGER AND UPDATE

Rig Manager is Kemper's free companion app for Mac and Windows. Download it below, connect your Stage's USB type B port to your computer with a standard USB cable, switch the Stage on and open Rig Manager. If it asks to install a software update, make the backup in step 2 first, then accept it.

2. BACK UP YOUR STAGE

Kemper's full backup is made on a USB stick, not in Rig Manager. Plug a stick into the Stage's USB type A port and wait for **USB Stick** on the display (formatting a stick erases it). In **Browser Mode**, press **USB Stick**, choose **Backup/Restore**, then **Backup**. Leave the stick in until the Stage says it is done.

3. LOAD YOUR RIGS

Unzip your download first. Skip any **__MACOSX** folder and files starting with **._** (Mac leftovers, not rigs). In Rig Manager, click **Local Library** in the Locations list on the left. Drag the rig files from the Presets folder into the list. Then select them and drag onto **MyProfiler** to store them on your Stage.

4. TEST OUT YOUR NEW RIGS

In Browser Mode, press **Views** and choose **Last Imported** to see your new rigs. Turn the **BROWSE** knob to pick one and push it to load. You are good to go! If you share a clip, tag the artist.

Troubleshooting Tips

No computer nearby? Copy the rigs into the Shared folder on your USB stick, plug it into the Stage and press **USB Stick** to import them.
