

Line 6

HX Stomp

1. GET HX EDIT

HX Edit is Line 6's free editor for HX Stomp. Download it from the Line 6 Software page below (free account needed). Connect HX Stomp by USB and open HX Edit. If it offers updates, click **Update Now**. It updates HX Edit, backs up your HX Stomp, then updates the firmware.

[Download HX Edit](#)

2. BACK UP FIRST

Just updated? Do the factory reset HX Edit asks for (hold footswitches 2 and 3 while turning HX Stomp on). Then choose **File > Restore From Backup...**, pick your backup and click **Restore Backup**. No update? Choose **File > Create Backup...** and click **Create Backup**.

3. LOAD YOUR PRESETS

Click an empty **New Preset** slot in the left list. Drag a .hlx file from your download's Presets folder onto it, or choose **File > Import Preset...**, click **Yes** and pick the file. It saves to HX Stomp right away.

4. TEST OUT YOUR NEW PRESETS

Double-click a preset to load it and play. Share a clip? Tag the artist!

Troubleshooting Tips

No device detected? Use a USB 2.0 or faster port, not a hub. Windows needs the drivers included with HX Edit.

Import error? Presets made on newer firmware will not load on older firmware, so update HX Edit and your firmware.

Also own HX Stomp XL or Helix? HX Edit converts these presets when you import them.
